

The **Strong Arm**

Are you a professional stagehand who believes in a safe working environment? Are looking for ways to improve the safety of your fly system? Then the “Strong Arm” is for you.

The most common and possibly the most dangerous work related task is working with an out of weight line set. Frequently, stagehands are responsible for hanging a flying set piece that by design requires the arbor to be fully loaded before the batten has any counter weight. Even when heavy drapes are tied directly to a batten, the load is not fully balanced until the drapes are floating off the floor. 20, 30, sometimes 60 feet of travel is needed before the line set is considered balanced.

When you use the “Strong Arm” you can manage that unbalanced load with confidence. A professional fabricator has developed the “Strong Arm” according to specification in the *Backstage Handbook*.

Other models sell for nearly \$200.

The “Strong Arm” can be the most important tool in your tool kit for just **\$120** + shipping. A secure rubberized hand grip can be added to your “Strong Arm” for just \$15.

The **Strong Arm**

Don't wait until the next time an arbor crashes to decide that you need a better way to control your unbalanced loads. Professional Flyman, Technical Directors, and Head Carpenters everywhere swear that without this line snubbing tool, the safety their work environment is questionable at best.

The "Strong Arm" is designed for 3/4" hand line. Custom models for 1" hand line can be order for an additional \$30. Add 4 to 6 weeks for delivery of 1" models

Get yours today and your confidence will soar!
